DETAILED ACTION

1. Claims 7-19 and 22-28 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only, and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,131,572 to Heinonen.

Heinonen shows a gas-dosing device as seen in Fig. 1, having a known volume container 5 connected to an inlet duct 1 to a supply of compressed gas 2, and the container 5 connected to an outlet duct 9 to a final dosing system 18.

In reference to claim 2-5:

Heinonen shows electromagnetic valves 3 and 8 connected to the inlet and outlets ducts respectively.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3754

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,131,572 to Heinonen in view of US 4,521,139 to Kretschmer et al.

Heinonen shows all claimed features as discussed above except for a method of determining the gas volume by measuring the pressure and temperature. Kretschmer shows a method to regulate the mass stream by measuring the pressure and temperature. It would have been obvious to a person with ordinary skill in the art at the time the invention was made to determine the gas volume by measuring the pressure and temperature as taught by Kretschmer since the volume of a gas is a function of its pressure and temperature.
